

PUBLIC PROGRAM PROSPECTUS

Climate Data Stories for Civic Action

A four-session studio for turning climate and resilience evidence into public narratives that support local decisions.

SPRING 2026

BROCHURE DRAFT 5

This prospectus mixes public copy, curriculum notes, and revision comments. Items marked draft, replaced, internal, pending, or not for poster should not be promoted as confirmed public details.

COPY STATUS

Final public name is approved for outward-facing posters. Older program names remain in this file only so the communications team can track revisions.

Civic Data Studio / Community Learning Series

From evidence to civic action

The studio is built for people who already encounter spreadsheets, dashboards, field notes, or climate indicators in their work, but need a sharper way to explain what the evidence means for public choices. Sessions combine short demonstrations, critique rounds, and structured drafting time.

REVISION NOTE

Old deck title: Data Stories for Climate Action. Keep in archive only; do not use as the campaign headline.

PUBLIC-FACING TITLE LOCK

After the naming review, the approved external title is Climate Data Stories for Civic Action. The word civic stays because the program is aimed at applied public decisions, not general climate communication.

NOT THE TITLE

- Climate Dashboard Sprint - internal project name
- Resilience Evidence Lab - workshop series umbrella

TEACHING TEAM

Lead instructor: Dr. Maya Chen, who owns the teaching arc, critique format, and final action-brief review.

Guest examples are expected from Jonah Patel on coastal dashboards and Lena Ortiz on outreach interviews, but neither should be listed as the instructor of record.

COURSE PHILOSOPHY

Participants practice the last mile of analysis: deciding what the public should see first, what context prevents misreadings, and how a visual claim becomes useful without becoming oversimplified.

INTERNAL AFFILIATION REMINDER

A draft bio once listed Dr. Chen as Center for Planetary Informatics. That affiliation is not confirmed for this public campaign. Use the instructor name and the short approved bio instead of inventing an institutional label.

Designed for applied civic teams

The strongest fit is for city staff, nonprofit analysts, and community organizers working with climate or resilience data. Participants may come from sustainability offices, public-health partnerships, housing coalitions, emergency-preparedness groups, or civic media projects.

No advanced statistics background is assumed. The course expects participants to bring a real decision, dataset, or briefing challenge from their work. Example topics include heat exposure, flood readiness, tree canopy, utility burden, cooling centers, and transportation access during extreme weather.

BEST-FIT ROLES

- Program managers preparing a public briefing
- Analysts translating technical outputs
- Community organizers comparing local evidence

LESS CENTRAL

- Teams seeking software certification
- Students looking for a survey course
- Vendors pitching platform demos

TONE FOR POSTERS

Use practical, public-service language. Avoid promising credentials, procurement outcomes, or a named venue until those items are cleared.

DRAFT MARGIN COMMENT

Earlier copy said 'for anyone who cares about climate.' That is too broad for recruitment and led to weak matches. Use the applied civic audience above for public promotion.

The program team wants the poster to feel welcoming but precise: people should recognize the work situation, not just the topic area.

Four Wednesday studio sessions

APPROVED PUBLIC SCHEDULE

Wednesdays, May 6-27, 2026
6:00-8:15 PM
Four live sessions with light fieldwork between meetings.

STATUS NOTE

This schedule was cleared after facilitator availability and community-partner calendars were reviewed. Use it for posters and short public copy.

Session	Public module name	Working focus
May 6	Finding the story signal	Question, audience, and decision framing
May 13	Making charts people can read	Accessible chart choices and map captions
May 20	Testing the narrative	Critique, uncertainty, and public trust
May 27	Action brief studio	One-page brief review and next steps

REPLACED DATE

The April 8-24 Tuesday/Thursday run was a placeholder from draft 2 and conflicts with partner availability. Do not use it externally.

VENUE AND TIME LANGUAGE

Room assignment remains internal and should not appear on a public poster. Avoid 'venue TBA' and avoid any 'time TBA' language because the time above is approved.

What participants should be able to do

The curriculum contains more activities than a poster can carry. For public promotion, the campaign team approved three outcome statements that are concrete, learner-centered, and safe to promise.

1**Frame messy climate datasets as clear public narratives**

Move from scattered indicators and caveats to a story a public audience can follow.

2**Build accessible charts and map captions for nontechnical audiences**

Practice chart choices, labeling, and caption language that reduce misreadings.

3**Leave with a one-page action brief for a local resilience decision**

Turn one evidence claim into a concise brief that can support a meeting or campaign.

COPY TRIAGE

Additional course benefits may include critique practice, confidence with uncertainty, a reusable checklist, and peer examples. Those are useful in the syllabus, but they are secondary and should not replace the three approved poster outcomes.

NOT A POSTER PROMISE

Certificate language is still pending with operations. Tuition has not been published. Neither should be placed on outward-facing creative assets.

Questions from partners

FAQ

Is this an online or in-person course?

Delivery details are still being coordinated with partner calendars. Public creative should promote the schedule and learning value without naming a venue.

FAQ

Will learners get a certificate?

Operations has not confirmed certificate language. Do not advertise a certificate, badge, continuing-education credit, or credential.

FAQ

How much does it cost?

Tuition is not yet published. Public posters should not include a price, discount, scholarship promise, or 'free' claim.

FAQ

How selective is the program?

The planning spreadsheet uses a registration cap of 32 for staffing. That cap is an internal operations number and should not appear in public copy.

POSTER GUIDANCE

A strong poster should compress the approved title, lead instructor, schedule, audience, and three learning highlights. It should not repeat this FAQ or expose operations details.

Short public copy draft

APPROVED COPY BASIS

Climate Data Stories for Civic Action helps civic teams turn climate and resilience evidence into clear public narratives, accessible visuals, and a one-page action brief. The spring studio is led by Dr. Maya Chen and meets Wednesdays, May 6-27, 2026, from 6:00-8:15 PM.

Apply by April 22, 2026 at civicdata.example/apply

ARCHIVE STRINGS

- Data Stories for Climate Action - old brochure headline
- Climate Dashboard Sprint - internal project name
- Late April launch - early planning assumption

DO NOT PROMOTE

- Civic Futures Accelerator sponsor line is unconfirmed
- Waitlist note is for staff follow-up only
- Venue, tuition, and certificate details remain off-poster

Design direction: confident, practical, and public-service oriented. Use enough whitespace for the three highlights to breathe. Avoid making the poster look like a spreadsheet, memo, or FAQ page.
